

# CSIP INNOVATION FORUM

*Science, technology and innovation policy is essential in shaping our future. Translating the narrative into clear options, strategies and outcomes is necessary, but far from simple.*

**Thursday, March 9, 2023**

11:30 am - 12:30 pm (CST)

Delivered by Zoom.

## *FUTURE POLICY PRIORITIES FOR THE REGULATION AND GOVERNANCE OF ACCESS TO UNPROVEN MEDICAL INTERVENTIONS IN CANADA – INSIGHTS FROM A CASE STUDY ANALYSIS*

AMY ZARZECZNY, ASSOCIATE PROFESSOR, JSGS

This presentation will share results from a case study analysis of previous regulation and governance of access to unproven medical interventions provided by physicians in Canada. The cases included chelation therapy for applications other than treating heavy metal toxicity, liberation therapy for multiple sclerosis, and unproven stem cell interventions. The data collection and analysis focused primarily on regulatory and governance tools and strategies that are empowered or constrained by law. One of the primary goals of this research was to identify lessons that could be used to inform and strengthen future regulatory and governance strategies and policy development regarding access to unproven medical interventions in Canada. Visit the JSGS Events calendar for a complete speaker bio.

*The Centre for the Study of Science and Innovation Policy (CSIP) invites all students, faculty, researchers, and citizens interested in the study of science, technology and innovation policy to participate in these forums.*
