

CSIP INNOVATION FORUM

Science, technology and innovation policy is essential in shaping our future. Translating the narrative into clear options, strategies and outcomes is necessary, but far from simple.

Thursday, December 2
12:00 - 12:55 p.m. (CST)

Delivered by Zoom.

BRIDGING SCIENCE, POLICY, COMMUNITY, AND MORE: CASES OF TRANSDISCIPLINARITY FROM CLIMATE CHANGE

PRESENTED BY GARRETT RICHARDS, ASSISTANT PROFESSOR,
ENVIRONMENTAL POLICY INSTITUTE, GRENFELL CAMPUS,
MEMORIAL UNIVERSITY

The biggest challenges of wicked problems like climate change cannot be solved in isolation. If universities and other research institutions want to maximize their positive contribution, they must engage in transdisciplinary relationships that bridge science, policy, and community. In this forum, Dr. Garrett Richards will explore transdisciplinarity through different scopes: as a lens for understanding interfaces between science, policy, and community; and as a set of practices for more engaged and impactful research institutions. The discussion will be grounded by examples from climate change and sustainability.

The Centre for the Study of Science and Innovation Policy (CSIP) invites all students, faculty, researchers, and citizens interested in the study of science, technology and innovation policy to participate in a bi-weekly forum.
